1. Add one more hidden layer to autoencoder

```
In [5]: from keras.layers import Input, Dense
            from keras.models import Model
           encoding dim = 32
            input_img = Input(shape=(784,))
            # "encoded" is the encoded representation of the input
            encoded = Dense(encoding_dim, activation='relu')(input_img)
           # "decoded" is the lossy reconstruction of the input
decoded = Dense(784, activation='sigmoid')(encoded)
# this model maps an input to its reconstruction
           autoencoder = Model(input_img, decoded)
# this model maps an input to its encoded representation
autoencoder.compile(optimizer='adadelta', loss='binary_crossentropy')
            from keras.datasets import mnist, fashion_mnist
            import numpy as np
            (x_train, y_train), (x_test, y_test) = fashion_mnist.load_data()
           x_train = x_train.astype('float32') / 255.
x_test = x_test.astype('float32') / 255.
            x_train = x_train.reshape((len(x_train), np.prod(x_train.shape[1:])))
            x_test = x_test.reshape((len(x_test), np.prod(x_test.shape[1:])))
            autoencoder.fit(x_train, x_train,
                                epochs=5,
                                batch size=256,
                                shuffle=True.
                                validation_data=(x_test, x_test))
         Epoch 1/5
```

235/235 [==========] - 3s 12ms/step - loss: 0.6941 - val\_loss: 0.6940 Epoch 2/5

2. Do the prediction on the test data and then visualize one of the reconstructed version of that test data. Also, visualize the same test data before reconstruction using Matplotlib

```
In [6]:
    from keras.layers import Input, Dense
    from keras.models import Model
    from keras.datasets import mnist, fashion_mnist
    import numpy as np
    import matplotlib.pyplot as plt
    encoding_dim = 32
    input_img = Input(shape=(784,))
    hidden_1 = Dense(256, activation='relu')(input_img)
    encoded = Dense(encoding_dim, activation='relu')(hidden_1)
    hidden_2 = Dense(256, activation='relu')(encoded)

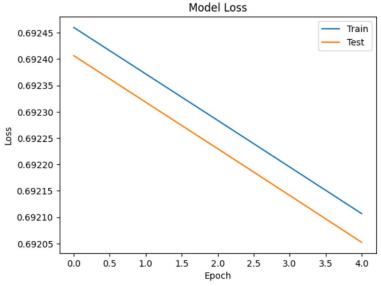

# Define the output Layer
    decoded = Dense(784, activation='sigmoid')(hidden_2)

# Define the autoencoder model
    autoencoder = Model(input_img, decoded)
```

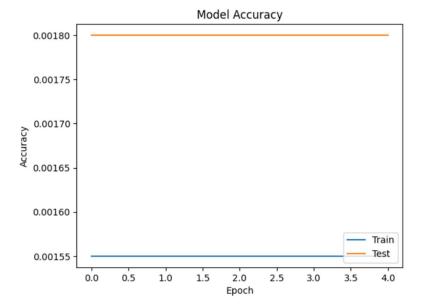

```
# Compile the model
autoencoder.compile(optimizer='adadelta', loss='binary crossentropy',metrics=['accuracy'])
# Load the fashion MNIST dataset
(x_train, _), (x_test, _) = fashion_mnist.load_data()
x_train = x_train.astype('float32') / 255.
x_test = x_test.astype('float32') / 255.
x_train = x_train.reshape((len(x_train), np.prod(x_train.shape[1:])))
x_test = x_test.reshape((len(x_test), np.prod(x_test.shape[1:])))
history = autoencoder.fit(x_train, x_train,
                epochs=5,
                batch size=256,
                shuffle=True,
                validation_data=(x_test, x_test))
decoded_imgs = autoencoder.predict(x_test)
# Visualize one of the reconstructed images
n = 10 # number of images to display
plt.figure(figsize=(20, 4))
for i in range(n):
    # Display original test image
    ax = plt.subplot(2, n, i + 1)
    plt.imshow(x_test[i].reshape(28, 28))
    plt.gray()
    ax.get_xaxis().set_visible(False)
    ax.get_yaxis().set_visible(False)
    # Display reconstructed test image
    ax = plt.subplot(2, n, i + 1 + n)
    plt.imshow(decoded_imgs[i].reshape(28, 28))
    plt.gray()
    ax.get_xaxis().set_visible(False)
    ax.get_yaxis().set_visible(False)
plt.show()
```

```
plt.plot(history.history['loss'])
plt.plot(history.history['val_loss'])
